

- Take note of the **general conditions of sale** of SA Dynamized Technologies (on the Biodynamizer® website www.biodynamizer.com and added to each of our invoices).
- Check that the devices are professionally connected by an **approved installer** with professional liability insurance, and this directly to the city water meter delivering a quality of water that is legally drinkable according to the local legislation in force in the country where the filter is placed. . For the European Union this corresponds to the "European Directive on drinking water 98 / 83CE 1998".
- For operators in the water transformation sector (B2B), from retail to final consumers and in the primary sector, if they use drinking water in the course of their activities, it is advisable to check the **water regulations in terms of quality control** (especially on the thresholds not to be exceeded for certain parameters including certain heavy metals and pollutants or germs present in the water). For Belgium (control authority = AFSCA): if the volume of water used is $\leq 100 \text{ m}^3 / \text{day}$, the control frequency is once a year. The operators mentioned above are required to comply with the Belgian Royal Decree of 14.01.2002 relating to the quality of water intended for human consumption which is bottled or used in food establishments for the manufacture and / or marketing food (including water).
- In the case of public or commercial use (previously approved by SA Dynamized Technologies) of the Aquaphor Biofilter, care must be taken to comply with **the regulations of the country where the filter is placed with regard to the replacement of the filter cartridge**. This replacement should be requested at least once a year (and this even before having reached the maximum capacity of the filter indicated by the manufacturer). In all cases it is recommended to maintain the devices according to the manufacturer's instructions.
- Consumables such as **filter cartridges**, etc. must be regularly replaced or maintained respecting the frequencies prescribed by the manufacturer. In this context, the operator keeps a record of the replacements and maintenances for the supervisory authority (the AFSCA for Belgium).
- If the appliances delivered to **professional or industrial kitchens** are used, including but not limited to steam ovens, dishwashers, coffee machines or the like, it is essential to check the compatibility of the appliances before placing the appliances. these devices with unsoftened water without which it is essential to provide for a duplication of the sanitary network (1 network for dynamized drinking water and 1 network for water used for professional devices)!
- Since the water filtration and dynamization devices do not soften the water, it is important to carry out a **standard annual maintenance of boilers and boilers** (heat to be set between 50°C - 55°C)!
- Devices sold by Dynamized **Technologies cannot be preceded by a water softener** (otherwise, the filter media of the filter may be saturated with sodium ions and the copper pipes of the dynamizer may be corroded). If your city water contains **more than 40°f** (very hard water), then it is advisable to plan an additional treatment of the limestone adapted to this situation.
- In case of return from **holidays** or prolonged stagnation period of 2 to 3 days of water in the pipes, we recommend that you let the tap water run for minimum **5 minutes** without consuming the filtered & dynamized water as drinking water.
